

NITRO TRANSPORT GAME

<https://scoutermom.com/334/nitro-transport-game/>

Materials (for each team/patrol/group):

- a 12 inch square board with 8 6 foot ropes attached as shown. Attach the ropes by whatever means you choose. Drilling holes in the board and tying them on works well.
- A small can - like a clean empty vegetable can or orange juice can
- water

Instructions

- Prepare the board and ropes before the meeting.
- Mark a starting point on the ground.
- Mark an ending point about 25 feet away from the starting point.
- Fill the can with water ("nitro") almost to the top.
- Place the board on the starting point.
- Place the can of water on top of the board.
- Have the team pick up the board using only the ropes.
- They must transport the "nitro" to the ending point without spilling it.
- The team should keep working together to solve the problem.
- When time is up, the team should spend a few minutes reflecting on how the exercise went, what worked well, what didn't work, etc.
