

# WATER DROPPER RACE

<https://scoutermom.com/33001/water-dropper-race/>

## Materials

- Plastic eyedropper – one per team
- Very small containers – two per team

## Instructions

1. Divide the group into teams.
2. Fill one container with water for each team and put it on one end of the play area. Put the same amount of water in each jar.
3. Put an empty container for each team on the other end of the play area.
4. Give each team a dropper.
5. On go, one person from each team will take the dropper and suck up water from their container. Then they will transfer the water to the team's empty container at the other side of the room.
6. They hand the dropper off to the next team member and continue transferring water in this way.
7. Play continues until one team has emptied their first container.
8. The team with the most water in their container at the end wins. This is not necessarily the team which finished first!

## Notes

- Instead of playing until a team empties their container, you can set a time limit.
- They can also play this game as individuals instead of teams.
