

SNEEZE DEMONSTRATION

<https://scoutermom.com/34172/sneeze-demonstration-for-germs-alive/>

This demonstration should be done in an open area where you will be able to sweep up afterwards.

Materials

- Balloon
- Confetti (or tiny cut up pieces of paper)
- Funnel
- Balloon pump
- Broom and dustpan

Instructions

1. Put a large spoonful of confetti inside a balloon which has not been blown up. A funnel might be helpful.
2. Blow up the balloon. Use a balloon pump if you have one. Do not tie the balloon.
3. Pretend like you are going to sneeze.
4. Hold up the balloon and let the step open up so the confetti sprays out.
5. Discuss how far the pieces went and how this is like the germs in a sneeze. That is why we should cover our noses and mouths when we sneeze.
6. Sweep up the pieces of confetti.
