

Boot Scraper Gadget

If you want to use this for First Class requirement 7b - Use lashings to make a useful camp gadget - you could lash the parts together. It would make the whole thing sturdier.

1. Find two sturdy Y shaped sticks and one sturdy straight stick.
2. Trim the Y sticks so that the straight piece at the base of each is about 8 inches long.
3. Trim the straight stick so it is about 12 inches long.
4. Drive the Y sticks into the ground, parallel so that they are about 8 inches apart and the joint of the Y is about 3 inches above the ground.
5. Place the straight stick in the Ys.
6. Scrape the mud from your boots by placing your foot on the straight stick and pressing down a little while drawing your foot across it.
