

Hand Washing Station Gadget

Use lashings to make a handwashing station from straight sticks and an empty gallon milk jug.

First, lash together three straight sticks to make a tripod. There are instructions for lashings in the Boy Scout handbook.

Next, lash three smaller sticks on to form an open “shelf”.

Poke a small hole into a clean one gallon plastic milk jug.

Poke a golf tee into the hole to close it up. Fill the jug with water.

Put a bar of soap in one “leg” of a pair of panty hose. Tie this to a convenient place on the tripod.

To use the handwashing station, pull the golf tee out and wash your hands under the stream, using the soap you attached. Put the golf tee back in to stop the flow of water.
