

Twig Picture Frame Craft

Materials

- 12 long, relatively straight twigs, about ¼ to ½ inch thick
- Low temperature hot glue gun or a hot glue pot
- twine
- photo

Instructions

1. Remove any leaves from the twigs.
2. Break six of the twigs into 11 inch lengths
3. Break the other six twigs into 8 inch lengths
4. Arrange the twigs as shown, with the longer twigs across the top and bottom and the shorter twigs on the sides. The center opening should be slightly smaller than the size of the photo. If necessary, use a blank piece of paper the same size as the photo to help you space them correctly.
5. Use the hot glue to tack the sticks together.
6. Wrap the twine around the intersections of the sticks as shown. Make about three wraps around.
7. Attach another piece of twine to the top to serve as the hanger.
8. Attach the photo to the back of the frame.
